## Findings

Distraction Index (DI): Right DI = 0.35, Left DI = 0.32.  
Osteoarthritis (OA): Radiographic evidence of **MILD OA** on the right hip, no evidence of OA on the left hip.  
Cavitation/Other Findings: No cavitation present.

## Interpretation

Distraction Index (DI): The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.35.  
OA Risk Category: The DI is between 0.31 and 0.49. This patient is at mild risk for hip OA.  
Distraction Index Chart:

**BREED STATISTICS:** This interpretation is based on a cross-section of 5308 canine patients of the STANDARD POODLE breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.29 - 0.69) for the breed. The breed average DI is 0.46 (solid square). The patient DI is the solid circle (0.35).

**SUMMARY:** The degree of laxity (DI = 0.35) falls within the central 90% range of DIs for the breed. This amount of hip

laxity places the hip at a mild risk to develop hip OA. Radiographic evidence for OA was found on one or both hips (see findings) confirming the diagnosis of Hip Dysplasia. **Radiographic evidence of MILD OA on the right hip, no evidence of OA on the left hip.**
